PRORX 2

Powerful and intuitive **FREE** lighting software

Optimize your live and architectural projects, with complete control of your **DMX, Art-Net and RDM** fixtures

Two user modes to suit all levels

A simplified PLAYER MODE

For quick and easy management of small and medium size projects and architectural installations.

An advanced PRO MODE

For complete, live personalized sound to light control.

3 Working main panels

- **Edit panel** : Patch, program & create scenes, cues and sequences, add triggers.
- **Live board** : Control, customize your screen & play Live.
- **Standalone panel** : Choose scenes, setup triggers, simulate and write in memory.

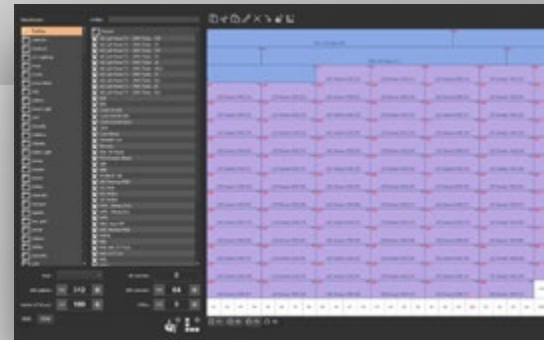

Overview of PRO DMX 2

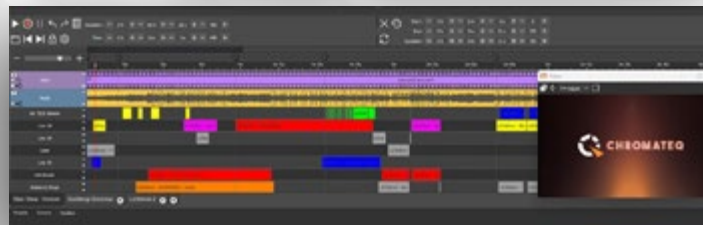

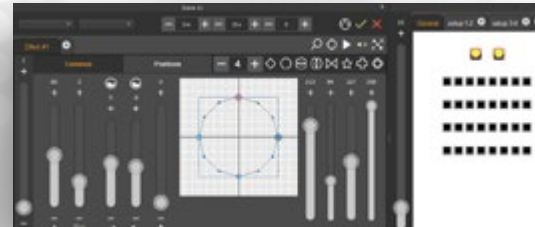

Setting up your DMX fixtures

Select your lighting fixtures from the library or create your own profiles via our editor, then manually patch them into the grid of 512 channels by choosing their physical address and DMX universe. After patch, organize your 2D fixtures according to your stage map / fire plan. Adjust the presets and start to program!

Create scenes, cues and sequences

Select fixtures, add steps, adjust channels and presets or create some complex effects quickly and easily with our multi-effect generator. Add trigger buttons and your show is ready to play !

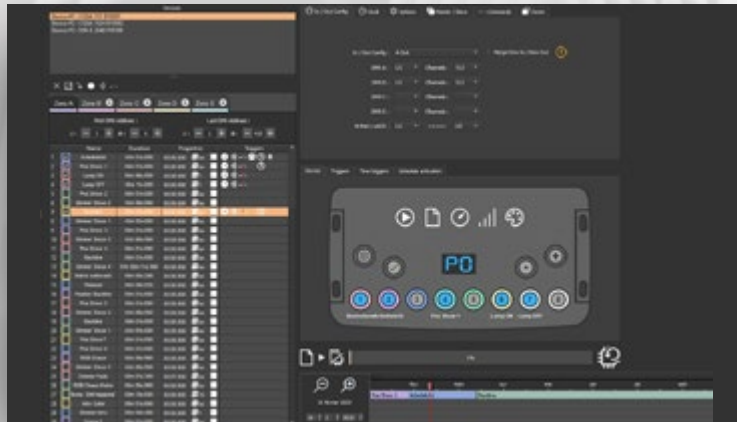

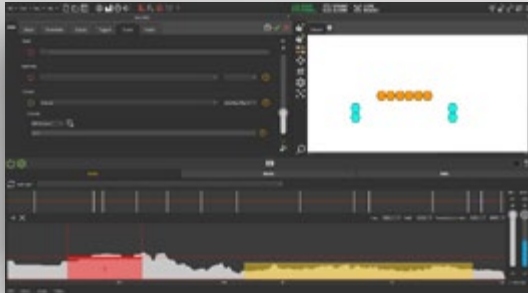

Synchronize your show

Quickly animate and synchronise your effects to an audio source with just a few clicks. Plan your scenes and sequences on one or more timeline, add audio and video media. Visualise results in real time with our software Studio DMX 3D viewer. Your show can begin!

Live lighting performance

Turn your computer into a powerful lighting control centre, keeping control at any time by adding custom cursors on live board. Use your own lighting control desk or MIDI controller.

Anywhere, anytime, control remotely on local network or through internet connection using your phone, tablet, or computer.

Let play your stand-alone show

Program your Chromateq device and write your show in memory for stand-alone use. Choose from a many possibilities of physical or remote triggering options. Then watch the show !

STUDIO DMX

Real time **3D viewer** lighting control software

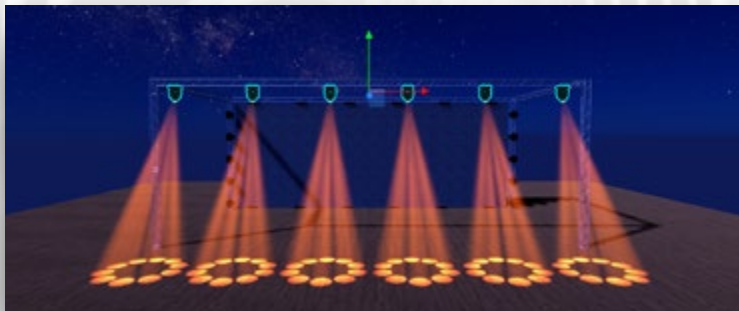

**Brings your lighting and stage designs to life with
a powerful,intuitive 3D environment**

Overview of STUDIO DMX

Build immersive stages with ease

- Organize every element with a clean hierarchical scene structure
- Shape your stage using advanced transformation and alignment tools
- Modify object anchor points with advanced gizmo tools
- Enjoy a magnetic grid and smart truss assembler for quick setup
- Access a rich library of truss, primitives, textured wall and floor, all assets ready-to-use

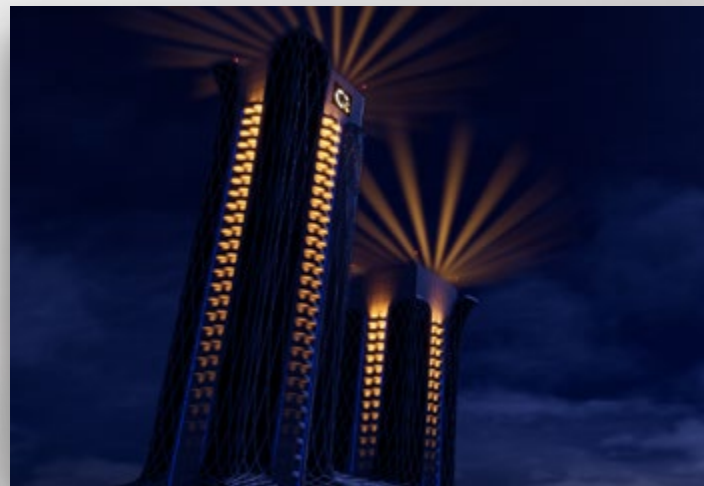

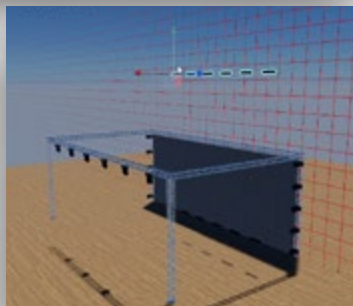

See your show from every angle

- Switch between multiple camera views and saved positions
- Explore your scene with smooth, intuitive navigation

Light your world

- Instant fixture patch sync directly into the 3D scene
- High-fidelity lighting presets including gobos, prisms, iris effects, multibeam outputs, and more.
- Fine-tune your environment with dynamic lighting controls
- Configure shadows and fixtures with precision for realistic simulations
- Smooth performance with hundreds of fixtures and large LED matrices.

Customize every detail

- Adjust materials, colours, and surface appearance to match your vision
- Project images directly onto surfaces for creative visual effects
- Personalize your workspace with flexible window layouts and resolution settings

Work with your own 3D models

Import your 3D assets seamlessly with support for: FBX, OBJ, GLTF2, STL, PLY, 3MF, DAE

2010 - 2025 Chromateq SARL - Chromateq - All rights reserved

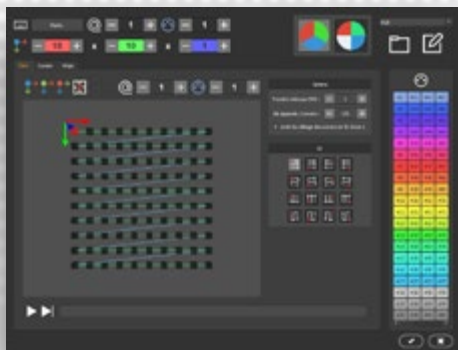

Pixelize your live and architectural projects, with complete control of your **DMX, RDM, Art-Net and SPI** LED Matrices

3 Patch mode to suit all projects

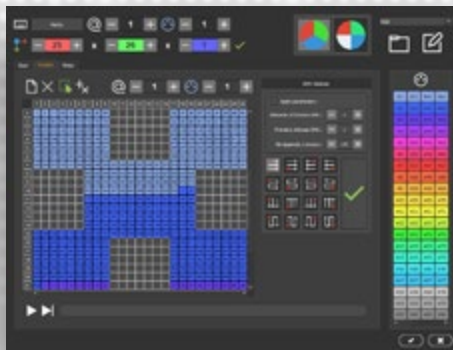

A simplified EASY MODE

Create a standard 2D or 3D DMX matrix and generate an automatic patch.

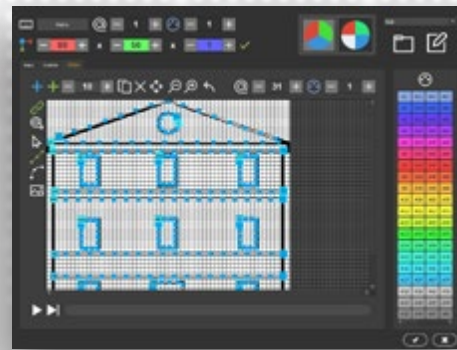

An advanced CUSTOM MODE

Create more complex matrix using the selection, addition and remove tools.

A specialised STRIPS MODE

Create an LED strip arrangement and follow your imagination.

Overview of PIXXEM

Powerful LED & Video Control Software

Pixxem is a professional software designed for LED matrix pixel mapping and lighting control on projects of any size, from compact LED installations to massive architectural and stage designs. Supporting up to 512 Art-Net DMX universes, Pixxem combines touchscreen control, real-time precision, and intuitive tools for creating and managing complex 2D and 3D matrix configurations.

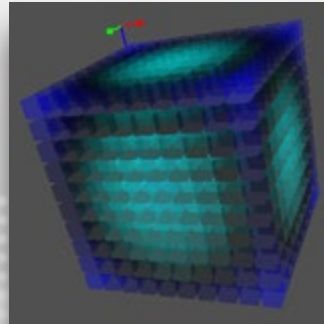

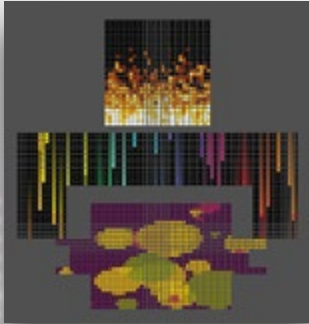

Key Features

- Up to 512 Art-Net & sACN universes (130,560 DMX channels)
- DMX RDM, SPI compatible
- DVI output up to 1280×1024 (1,310,720 pixels)
- Multi-matrix and 3D pixel mapping
- Over 500 customizable effects
- Audio/Video timeline synchronisation
- MIDI, Ethernet, USB, and DMX triggers
- Windows & macOS compatible
- Free updates and support

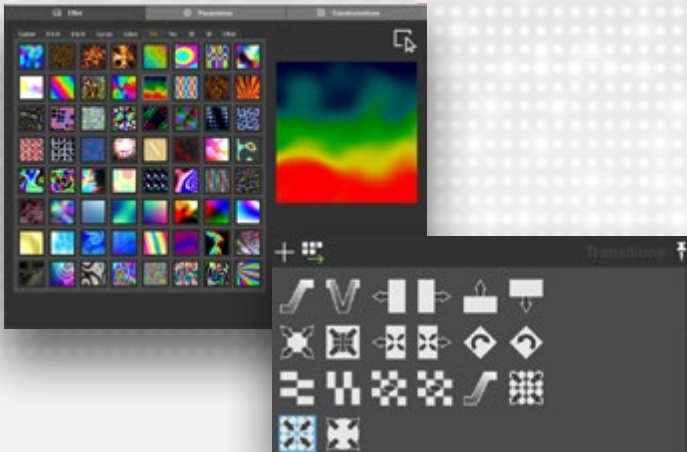

Huge Number of Pixels & Outputs

Manage up to 512 Art-Net or sACN universes, providing 130,560 DMX channels or 43,350 RGB pixels. Pixxem also supports high-resolution DVI output up to 1280×1024 (1,310,720 pixels) for LED panels and large video walls. Whether you're running standard DMX fixtures, LED strips, or mixed pixel matrices, Pixxem ensures smooth performance, optimal refresh rates, and perfect synchronisation across all devices.

Multi Matrix & 3D Project Management

Pixxem easily handles multiple matrices and 3D configurations within the same workspace. Each matrix can be freely positioned and combined. The software's advanced patching engine manages all three dimensions (X, Y, Z), enabling stunning 3D lighting designs and multi-surface visual mapping. Custom pixel layouts and mixed fixture profiles are supported for maximum flexibility and creative freedom.

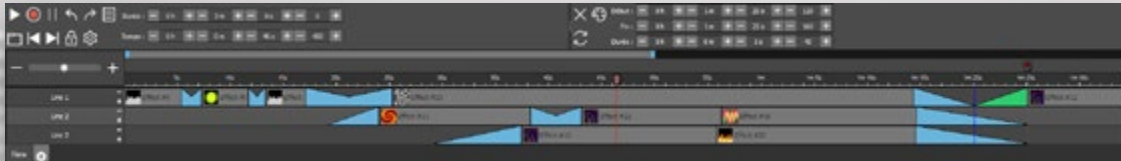

Graphic Effects & Visual Creativity

Pixxem comes with a comprehensive library of over 500 pre-programmed graphic effects, ranging from simple colour transitions to complex 3D animations. The software supports videos, images, animated GIFs, particle systems, text and shape editors, and moving 3D objects.

Combine multiple layers of effects, apply filters (colour, invert, negative, etc.), merge different visuals and choose transitions to produce unique, dynamic, and high-quality effects across all your pixels.

Synchronized Show to Perfection

A powerful timeline editor allows you to synchronise lighting, video, and audio with precision. Add marker points to define key moments and transitions, creating immersive and perfectly timed shows. Pixxem is ideal for concerts, fixed installations, and video mapping, where precise synchronisation is essential.

Easy Triggers

Pixxem's intuitive control interface lets you prepare and play shows easily using Ethernet, MIDI, keyboard, USB devices, or DMX triggers. Trigger any preprogrammed scene, transition, or sequence instantly. This flexibility makes Pixxem equally suitable for live performances and automated installations requiring reliable, repeatable control.

WI•LIGHT

FREE mobile lighting control solution in its enhanced 2025 version

Transform your smartphone or tablet into a powerful portable **DMX lighting command system**

Easy to operate in 5 steps

1. Program your lights with the PRO DMX 2 software.
2. Save your scenes in the Chromateq devices (CQSA-E, DIN-E, CLUB-E).
3. Connect the device and the mobile to the Wifi router and access point.
4. Run Wi-Light and select your device on the network.
5. Start/stop scene saved in memory and remote the device from your mobile or tablet.

Devices compatible

Easily control your lights over Wi-Fi, LAN or Internet.

Overview of Wi-Light

Remote Control and Intuitive operation

- Control Chromateq software live or stand-alone Chromateq devices without a computer via Wi-Fi or Internet.
- Enhanced Scene & Zone Management
- Manage in real time scenes, RGB/W colours, dimmer, speed, DMX custom cursor, thanks to control panel button quick-access.
- Easy access to connected devices parameters.
- Modify clock, network settings and operating modes of devices directly with the APP.

Customizable Interface

Modify buttons, icons, colours, background for a tailored experience, and save your custom settings.

- Display or hide pages and options.
- Personalize buttons with thematic icons, text and colors.
- Create custom sliders for DMX channel control.
- Secure the app and configuration access with a password.
- Group and organize interfaces in a tree architecture.

FULL: + RDM + 24h Timeline + Multi timeline + Timeline Live record + 3D unlimited + MIDI Time Clock + SMPTE + PC Calendar & Clock Triggers.

LAN: WI Light 2 APP / API compatible with Stand Alone -E interfaces in local network

WEB: WI Light 2 APP / API compatible with Stand Alone -E interfaces over internet with an user account

B / W: Black or White housing color available

XLR / TB: XLR or Terminal Block connectors available

XLR 3/5: 3 or 5 PINs XLR available before purchase

Art-Net Out on SD: Art-Net data is save on micro SD card and play back Stand Alone without computer from the interface. Art-Net signal is sent to the network from the RJ45 ethernet port of the interface.

Art-Net Live: Art-Net signal is sent to the network from the software and computer RJ45 Ethernet port.

Infrared: Infrared LED to receive commands and triggers from the Infrared Remote.. Need the IR Kit with 2 Remotes and Infrared external PCB.

RS232: Device can receive some orders and commands listed in the Stand Lone mode of the software and datasheet. Out option can send a specific sequence of characters to another RS232 compatible device.

Master / Slave: Communication port between several interfaces (up to 32, 20m max) to synchronize data, scene , steps and triggers. LTP, Desynchronize and more options are also available.

Calendar, Clock, Brightness: Scenes can be trigger On/Off by Time, Date or according to the Light Intensity

Smart Contacts: Port of the interface to receive simple dry contact actions when connected to 5V DC. Can Trigger On, On/Off, Release (On when contact is don, Off when contact is release), Restart, Hold contact (Dimmer +, Speed, next scene), Priority, Start and Stop and play scene options

UDP: Open Ethernet protocol under UDP format to send commands to the Chromateq software and Chromateq Ethernet devices, Requir to choose the IP address to send the UDP commands.

Wi-Light 2APP / API: Easy application for iOS and Android mobiles and tablets. Can control the interface and the software with triggers action and simple commands actions and DMX level on channels.

Minimum configuration

Mobile-App :

Android 5 / iOS 10 and +
1Ghz CPU, 1 Gb RAM, 60 Mb disk

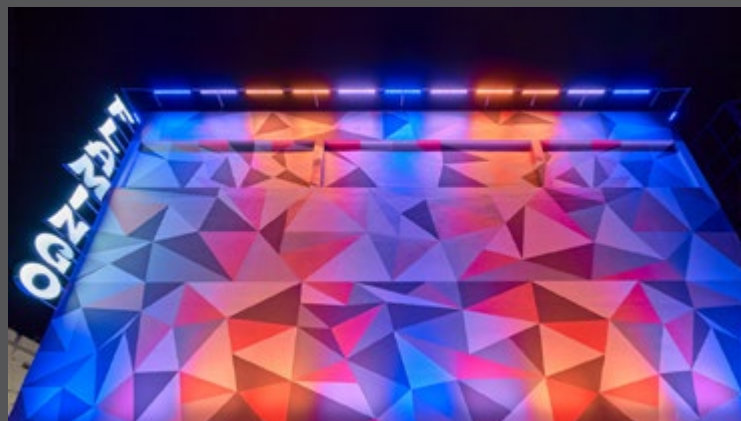

PC: Windows, Mac OS, Linux (32 and

64 bits)

2Ghz CPU (2 cores), 8 Gb RAM
2Gb RAM graphic card (for 3D only)
600 Mb disk, 1920x1080 resolution
1 USB port (device)
1 Ethernet port (for Art-Net & sACN)
